

Fix Data Loading Issues and Categories.map Error

Summary

This PR fixes critical data loading issues that occurred after the Prisma to Supabase migration. All API routes have been migrated to use Supabase, and missing routes have been added.

Issues Fixed

Bug Fixes

1. **Fixed `categories.map` is not a function error** - The categories API was still using Prisma and returning error objects instead of arrays
2. **Fixed `paquetes` page not loading data** - API route now properly fetches from Supabase
3. **Fixed `inflables` pages not loading data** - Created new API routes and migrated services endpoint

New Features

- Added `/api/inflables` endpoint for fetching all inflables
- Added `/api/inflables/[slug]` endpoint for fetching individual inflables
- Added `/api/packages/[slug]` endpoint for fetching individual packages

Migrations

- Migrated `/api/categories` from Prisma to Supabase (hardcoded categories based on inflables types)
- Migrated `/api/services` from Prisma to Supabase
- Migrated `/api/contact` from Prisma to Supabase
- Enhanced `getInflables()` to properly handle 'ambos' type for infantiles category

Documentation

- Added comprehensive `MIGRATION_FIXES.md` documenting all changes
- Updated `supabase-schema.sql` with `contact_requests` table

Files Changed

Modified (6 files):

- `app/api/categories/route.ts` - Migrated to Supabase
- `app/api/services/route.ts` - Migrated to Supabase
- `app/api/contact/route.ts` - Migrated to Supabase
- `lib/supabase-queries.ts` - Enhanced `getInflables()`
- `lib/supabase.ts` - Added types
- `supabase-schema.sql` - Added `contact_requests` table

New (5 files):

- `app/api/inflables/route.ts`
- `app/api/inflables/[slug]/route.ts`
- `app/api/packages/[slug]/route.ts`
- `MIGRATION_FIXES.md`
- `PR_DESCRIPTION.md`

Testing Done

- ✓ All API routes now use Supabase instead of Prisma
- ✓ Categories endpoint returns proper array structure
- ✓ Services endpoint properly fetches and transforms inflables data
- ✓ Inflables routes created and tested
- ✓ Contact form migrated to Supabase

Database Changes Required

After merging, run the `contact_requests` table creation SQL from `supabase-schema.sql` in your Supabase SQL Editor (lines 264-304).

Breaking Changes

None - All changes are backward compatible with existing frontend code.

Next Steps After Merge

1. Run the `contact_requests` SQL in Supabase
2. Test all pages:
 - `/paquetes` - Should load packages
 - `/servicios` - Should load with working filters
 - `/servicios/inflables-infantiles` - Should load without errors
 - Contact form - Should submit successfully

Related Issues

Resolves the following issues mentioned in the task:

- `TypeError: categories.map is not a function` in `filter-sidebar.tsx` line 200
- Paquetes recreativos page showing no data
- Inflables pages showing no data
